

UDHAYA KUMAR

Senior Platform Engineer - Backend Architecture

mail4udhaya@gmail.com | +91 7259948358 | [linkedin.com/in/udhayakumar](https://www.linkedin.com/in/udhayakumar) | github.com/udhayakumaran | India / Remote

SUMMARY

Senior Platform Engineer focused on backend architecture, distributed systems, and production reliability. Designed systems across 50+ microservices, owned migration decisions, and led systems through rollout, incident recovery, and operational change.

CORE SKILLS

Languages: Node.js, TypeScript, JavaScript, PHP
Systems: distributed systems, microservices, APIs, event-driven architecture, CDC
Data: MySQL, PostgreSQL, BigQuery, ClickHouse, MongoDB, Redis
Reliability: migration strategy, observability, incident response, rollback planning, GKE

EXPERIENCE

Senior Product Development Lead (Backend / Data Platform) ConvertCart AI System Pvt Ltd Bengaluru (Remote)	Aug 2021 - May 2026
- Set architecture direction for backend and data systems spanning 50+ microservices, with explicit boundaries between ingestion, event transport, serving, and analytics. - Chose raw landing plus destination-specific fan-out to keep source schemas reversible while serving MongoDB, ClickHouse, and BigQuery workloads. - Led store-by-store migration planning and rollout across 200+ merchants; platform team grew from 4 to 7 engineers.	
Senior Software Developer - Team Lead (Backend) ConvertCart AI System Pvt Ltd Bengaluru	Aug 2020 - Aug 2021
- Rebuilt scheduled ingestion into CDC-backed flows, improving webhook freshness from days-late batch data to sub-minute. - Stopped a production migration when a 50M-row CDC snapshot consumed 60% CPU and blocked writes; recovered through Datastream and changed the rollout strategy.	

EARLIER EXPERIENCE

Software Development Lead

Aug 2018 - Feb 2019

Friday Media Group | Bengaluru

- Led backend delivery for marketplace APIs, content ingestion, and data pipeline work while coaching engineers.

Senior Software Engineer - I / Software Analyst

Feb 2014 - Jul 2018

Scientific Games | Bengaluru

- Reduced a recurring MySQL reporting workload from 45 minutes to 3 minutes through query, index, and partition design.

Web Developer / Junior Software Engineer

Apr 2010 - Jan 2014

Tenlegs and ISPG Technologies | India

- Built web applications, email infrastructure, logistics integrations, and MySQL-backed operational tools.

SELECTED SYSTEM EVIDENCE

- Boundary decision: kept raw source schemas reversible at ingestion and normalized inside destination-specific consumers.
- Performance decision: moved worst-case latency from 30 seconds to 1.5-2 seconds tactically, then made the serving architecture durable.
- Reliability decision: retained a Datastream recovery path when the Debezium snapshot blocked production writes.
- Scale decision: reduced production lock contention across 100+ merchants by lowering bulk-load parallelism.
